POWERPLASTICSCORP.COM

## INTRODUCTION

Power Plastics manufactures all types of plastic industrial components such as gears, bearings, sprockets, chain guide, pulleys and set collars. Using materials such as UHMW, Nylon, Acetal, PTFE, Phenolic as well as many other types of polymers. Power Plastics offers quick delivery, unparalleled prices and outstanding service on any finished product or raw material.

Power Plastics was founded in 1992 in Portland, Oregon to service the distribution market for polymer transmission components and materials. We continue today with that same philosophy. This has enabled us to provide a level of service to our customers that is unrivaled in the industry.

Please explore our web site to learn more about us. If you have comments or questions, let us know by clicking 'Contact Us' or please do not hesitate to call us toll free at 800-495-8141. Thanks for visiting and be sure to check back often for updated information.

## ABOUT US

At Power Plastics Corp., our focus is on Industrial Plastics and Components. Get in touch with us today and we will send you a catalog which lists all of our standard stocked components!

Power Plastics is a leading distributor of mechanical grade plastics such as UHMW, Nylon, Acetal, PTFE and Phenolic. We stock large quantities of rod tube and sheet.

Power Plastics manufactures and stocks a whole range of industrial plastic components such as:

- [Chain Guide](#)
- [Gears](#)
- [Bearings](#)
- [Sprockets](#)
- [Pulleys](#)

Power Plastics serves the distribution market nationwide. Please give us a call at 800-495-8141 for technical assistance and to help find a distributor in your area.

## CUSTOM FABRICATION

We offer custom fabrications to meet specific needs. Please contact us for more details.

# PRODUCTS

## Acetal Products

Acetal provides high strength and stiffness coupled with enhanced dimensional stability and ease of machining. As a semi-crystalline material, it's also characterized by a low coefficient of friction and good wear properties, especially in wet environments.

Because acetal absorbs minimal amounts of moisture, its physical properties remain constant in a variety of environments. Low moisture absorption results in excellent dimensional stability for close-tolerance machined parts. In high moisture or submerged applications, acetal bearings outperform nylon 4 to 1. It's ideally suited for close tolerance mechanical parts and electrical insulators which require strength and stiffness. It also offers resistance to a wide range of chemicals including many solvents.

Power Plastics has both homopolymer and copolymer grades of acetal including enhanced bearing grade materials. Acetron® GP acetal is porosity-free and offered as our standard general purpose grade. For slightly higher mechanical properties, we offer a broad size range of the homopolymer acetal (Delrin\*) products. For improved frictional properties PTFE-enhanced Delrin AF products are available.

### Applications Include:

- Bearings and Bushings- Acetal offer excellent stability and good wear resistance in a variety of moist environments.
- Rollers- Guide rollers machined from Acetron® GP rod operate smoothly and reliably in lift gate systems used to load cargo onto truck beds. (Prior materials: Cast Iron, Cast Aluminum)
- Gears- Acetron® GP maintains tight tolerances despite environmental and clean in place chemical exposure on dairy equipment. (Prior materials: Bronze, Stainless Steel)

## Nylon Products

Nylon's toughness, low coefficient of friction and good abrasion resistance make it an ideal replacement for a wide variety of materials from metal to rubber. It weighs only 1/8 as much as bronze. Using nylon reduces lubrication requirements, eliminates galling, corrosion and pilferage problems, and improves wear resistance and sound dampening characteristics. Nylon has a proven record of outstanding service in a multitude of parts for such diverse fields as paper, textiles, electronics, construction, mining, metalworking, aircraft, food and material handling.

Nylon is easily fabricated into precision parts using standard metalworking equipment. It's good property

profile combined with a broad size range availability have made the material very popular. Today, a variety of extruded and cast nylon grades are available to match specific application demands.

### Applications Include:

- Bearings- Nylatron® NSM Nylon offers up to 10 times longer part life than standard type 6 nylon. (Prior material: Bronze)
- Rollers, Wheels, Wear Components- Nylon offers better wear resistance than other materials in a variety of wear applications. (Prior materials: Steel, Aluminum, UHMW-PE, Injection Molded Nylon)
- Wear Pads- Wear pads made of Nylatron® NSM nylon are lightweight, able to support heavy loads, and are non-abrasive to mating surfaces. (Prior material: Bronze and cast iron covered with UHMW-PE)
- Gears- Gears made of Nylatron® NSM nylon run quieter and wear longer without the need for lubrication on processing equipment. (Prior materials: Bronze and steel)

## UHMW Products

The excellent abrasion resistance of UHMW polymer is due to its ultra-high molecular weight. The abrasion resistance allows UHMW to be used as a bearing surface or sprocket contact point, reducing associated wear to mating components. UHMW outwears polished stainless steel by a factor of 5:1. This fact makes it ideal for conveyor wear points such as; chain guide, belt slider beds, dump truck liners, and general power transmission equipment. The durability is high, no particles will wear off or leave a residue...meaning it is approved by the FDA for contact with food. UHMW is very corrosion resistant. One form of corrosion is the continuous presence of water on a material. UHMW will NOT absorb any water over time. It is also very abrasion resistant. Some other beneficial aspects of this material are the good flow characteristics and its ability to absorb shock.

UHMW has a very low co-efficient of friction and even ice will not stick to its surface. Another outstanding property is its high impact strength which is maintained down to very low temperatures. The impact performance under multi-axial shock stress and high stress rate is remarkable. UHMW is available in sheet form or rod stock and is quickly machined. Unconventional machining techniques, allow parts to be fabricated far quicker than steel components.

### Applications Include:

- Rollers
- Marine Environments
- Wear Pads
- Bushings
- Sprockets

# MATERIALS

## Acetal

Acetal offers good temperature resistance, excellent dimensional stability and low moisture absorption. It is used in environments where moisture or close tolerance dimensions are needed. It is FDA, USDA, 3A and NSF compliant.

## HDPE

High Density Polyethylene. Natural color is white (translucent in thin sections).

Harder, stiffer, and more crystalline than LDPE, but higher temperature and chemical resistance. HDPE is a low cost material for strength, toughness, moisture resistance and UV resistance (when pigmented black). Some grades can be used in food contact applications when used in accordance with FDA standards.

## LLDPE

Linear Low Density Polyethylene. Natural color is white (translucent in thin sections).

Softer than HDPE, and more crystalline than LDPE, LLDPE is a low cost material for high impact, low tensile, low hardness, moisture resistance applications and UV resistance (when pigmented black). Some grades can be used in food contact applications when used in accordance with FDA standards.

## Nylon - 6, 6/6, 11 and 12

Natural color is white or ivory. Offers great tensile strength and good impact and abrasion resistance. High temperature and chemical resistance. The very low coefficient of friction makes it suitable for wear applications. Nylon will absorb moisture to varying degrees which can affect dimensional stability as well as some mechanical properties. Some grades can be used in food contact applications when used in accordance with FDA standards.

## Polycarbonate

Natural color is clear. Maintains a good impact resistance and very high clarity. Has the maximum rigidity available as well as excellent outdoor weathering. Good dimensional stability and fairly high continuous use temperature over 250 Degrees F.

## Polypropylene

Natural color is off-white translucent. Good tensile properties and stiffness at service temperatures between 260F-270F. Good impact strength but not as good as HDPE. Polypropylene is a low cost, good chemical and abrasion resistant homopolymer. Resistant to stress cracking but poor weatherability. Some grades can be used in food contact applications when used in accordance with FDA standards.

## Polyurethane - Both Ether and Ester based

Natural color is transparent to translucent. Available in soft grades(60 durometer on the Shore A scale) to hard grades (99 durometer on the Shore A scale). This range of hardness and properties such as tensile and tear strength, good abrasion resistance, and good impact resistance from the harder grades makes polyurethane a versatile elastomer. Ester TPUs are tougher than Ether. They are good in applications involving grease, but will degrade in water. Ethers are good in conditions involving water, but less resistant to chemicals and oils. Excellent cut resistance. Some grades can be used in food contact applications when used in accordance with FDA standards.

## PVC - Flexible and Rigid

Natural color is clear to bluish translucent. PVC has excellent weatherability/UV resistance. Wide range of flexibility obtained by use of plasticizer. Good dimensional stability and nonflammable. Rigid PVC is very corrosion resistant but has poor abrasion resistance. Limited thermal capability. Some grades can be used in food contact applications when used in accordance with FDA standards.

## PVDF - Polyvinylidene Fluoride (Kynar/Hylar)

Natural color is translucent beige to clear. Excellent in high heat applications and excellent chemical resistance, PVDF is also very UV resistant. PVDF has greater strength, wear resistance, and creep resistance than PTFE (Teflon). Good continuous use temperature up to 300 degrees F.

## UHMW/PE - Ultra High Molecular Weight Polyethylene

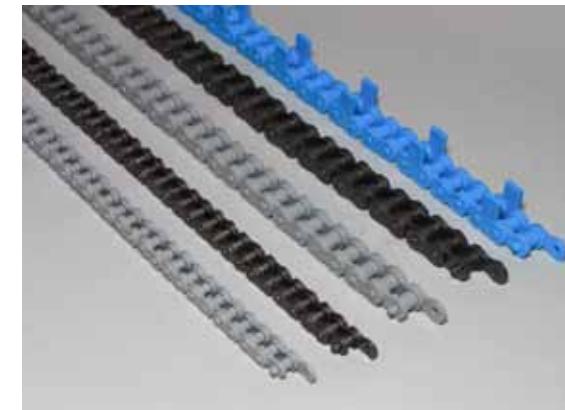

Natural color is opaque white. Outstanding abrasion and impact resistance with a very low coefficient of friction. Excellent choice for wear applications. Some grades can be used in food contact applications when used in accordance with FDA standards.

# Plastic Roller Chain

## Plastic Roller Chain

P/N	Chain #	Material	Tensile strength at break	Elongation % ultimate	at 75% tensile strength	Elongation recovery at removal of load	After 10 min.	After 30 min

Plastic roller chains are designed for light duty applications. The chains can be used in harsh chemical and caustic environments. They are FDA approved when manufactured from natural acetal. They are quiet, self lubricating, non-conductive, and non-magnetic. Plastic chains and sprockets are usually about 1/8 the weight of equivalent metal components.

### NOTE

1/4" Pitch  
Nominal Plate Thickness .110"

Power Plastics manufactures sprockets in a variety of engineering grade plastics to suit many applications. Polymer type sprockets can outperform premium steel sprockets in many harsh applications.

The most common material used for roller chain sprockets larger than #35 chain is UHMW-PE. With an excellent flexural modulus, UHMW-PE slightly deforms under load to evenly distribute the weight of the load among several teeth. This gives UHMW-PE sprockets the ability to handle good loads while increasing chain life.

Other advantages to polymer sprockets include the ability to withstand corrosive environments, reducing sounds levels and meeting FDA/USDA requirements.

Power Plastics can manufacture any type and size of sprocket. You are not limited to the specifications shown in the charts. If a larger hub is required, you need a special face thickness or any other modification, just let us know and we can easily make the change.

**We manufacture our sprockets as either A, B, or C hubs. When ordering an A or C hub, just replace the "B" in the part number to either an A or C.**

Power Plastics manufactures sprockets in a variety of engineering grade plastics to suit many applications. Polymer type sprockets can outperform premium steel sprockets in many harsh applications.

The most common material used for roller chain sprockets larger than #35 chain is UHMW-PE. With an excellent flexural modulus, UHMW-PE slightly deforms under load to evenly distribute the weight of the load among several teeth. This gives UHMW-PE sprockets the ability to handle good loads while increasing chain life.

Other advantages to polymer sprockets include the ability to withstand corrosive environments, reducing sounds levels and meeting FDA/USDA requirements.

Power Plastics can manufacture any type and size of sprocket. You are not limited to the specifications shown in the charts. If a larger hub is required, you need a special face thickness or any other modification, just let us know and we can easily make the change.

We manufacture our sprockets as either A, B, or C hubs. When ordering and A or C hub, just replace the "B" in the part number to either and A or C.

2040B30	30	4.81"	5.06"	1/2"	2-1/4"	3-1/4"	1"

### NOTE

1" Pitch

Power Plastics manufactures sprockets for double pitch roller chain. Double pitch sprockets are very similar to standard pitch sprockets but the chain only engages in every other tooth. In sprockets that have an odd number of teeth, the chain will make contact with a tooth on every other rotation thereby increasing the life expectancy of the sprocket.

Standard material used for double pitch sprockets is UHMW-PE because of the excellent flexural modulus properties. Although other materials such as nylon or acetal can be used. For design assistance in choosing the correct material for your application, just call Power Plastics.

### NOTE

1-1/4" Pitch

Power Plastics manufactures double pitch sprockets from UHMW-PE. Shown in the catalog are standard sizes, but any configuration is possible from large hubs, to sprockets without hubs. To order A plate sprockets or a C hub; just replace the "B" to an "A" or "C".

### NOTE

1-1/2" Pitch

Power Plastics manufactures sprockets for double pitch roller chain. Double pitch sprockets are very similar to standard pitch sprockets but the chain only engages in every other tooth. In sprockets that have an odd number of teeth, the chain will make contact with a tooth on every other rotation thereby increasing the life expectancy of the sprocket.

Standard material used for double pitch sprockets is UHMW-PE because of the excellent flexural modulus properties. Although other materials such as nylon or acetal can be used. For design assistance in choosing the correct material for your application, just call Power Plastics.

Power Plastics offers design assistance to determine which material to use in application. Polymer type sprockets are used in industries from food processing to waste water and from the medical industry to wood processing plants.

### Benefits include:

- Reduce sound levels
- Electrical Properties: Arc Track Resistance
- Weather resistance
- Chemical Resistance
- Reduced Weight
- FDA/USDA Compliant
- No lubrication necessary

Power Plastics manufactures all types mill sprockets including 55 series (1.631" pitch), 78 series (2.609" pitch), 82 series (3.075" pitch) and 131 series (3.075" pitch). Standard material used in UHMW-PE because of the many excellent inherent properties such as reduced noise levels, self lubricating, moisture resistant, corrosion resistant, reduced weight and cost-effective.

Of course any modification can be made to the sprockets from what is shown in the charts such as increased hub projections, grease grooves or any other change that would be needed.

#### NOTE

1.609" Pitch  
C Hub, UHMW-PE Black Repro

Power Plastics offers design assistance to determine which material to use in application. Polymer type sprockets are used in industries from food processing to waste water and from the medical industry to wood processing plants.

#### Benefits include:

- Reduce sound levels
- Electrical properties: Arc track resistance
- Weather resistance
- Chemical resistance
- Reduced weight
- FDA/USDA compliant
- No lubrication necessary

Flat wire belt sprockets manufactured from high strength engineering plastics can offer advantages over steel and stainless steel in many applications. They are solutions to problems such as corrosion in applications where chemical agents can cause damage to ordinary steel sprockets. Plastic sprockets are ideal in the food processing industry because UHMW-PE is FDA/USDA approved.

**Other benefits are:**

- Reduced noise levels
- Self lubrication
- Resistance to moisture
- Reduction in belt wear

# Waste Water Treatment

Power Plastics offers sprockets, wear shoes and wear strips made from tough Ultra High Molecular Weight Polyethylene (UHMW-PE) and oil filled Nylon materials that will survive the harshest water treatment environments. **Our sprockets are manufactured from cast UHMW-PE sheet allowing the highest molecular mass structure providing the best wear rate in the industry.**

UHMW-PE resists 85% sulfuric acid and concentrated sodium hydroxide. It has a specific gravity of .84 making it lighter than water and it does not absorb water. UHMW-PE's low co-efficient of friction and weight give Power Plastic water treatment products abrasion resistance five times greater than metal. This allows for the reduction of power needed to drive a system by up to 15%.

The following information provides a brief overview of Power Plastic sprockets for H78 as well as 720 chains. For more information please feel free to call PPC.

### STANDARD DESIGN FEATURES:

#### Split Hubs

Power Plastic sprockets are supplied with split hubs as STANDARD. The split hub design allows a sprocket to be assembled onto or removed from shafts without removing the shaft from the wall. It also allows the sprocket to be removed without removing adjacent items such as bearings, set collars, or static shaft bushings.

Additionally, split sprockets can be reversed, allowing for use of the unworn sides of the sprocket teeth. This alone doubles the life of the sprocket.

Power Plastic sprockets are also available in various types. Most Power Plastic sprockets, however, are supplied as type "C". These hubs are symmetrically shaped with the hub extending an equal distance from the sprocket wheel on each side. Power Plastic sprockets are also available in "C" offset (sprocket wheel extends from hub slightly off-center), "B" type (hub only extends on one side), and "A" type (no hub at all — sprocket attached to alternate hub or device via holes on sprocket wheel).

#### Hunting Tooth

Power Plastic 720 sprockets are supplied in hunting tooth design as STANDARD. These hunting tooth sprockets have an odd number of teeth and are spaced at half of the chain pitch. With this arrangement, there are essentially two independent sets of sprocket teeth. Every time the sprocket makes a revolution, the chain links engage a new set of teeth. Each tooth makes contact with the chain only half as many times as it would on a regular sprocket, thus doubling the life of the sprocket.

With their standard split, hunting tooth design Power Plastic 720 sprockets will last four times as long as solid non-hunting tooth sprockets.

\* Because of the smaller pitch size, NH78 sprockets are not available in hunting tooth style.

# Waste Water Treatment

## Sprocket Features

### OPTIONAL DESIGN FEATURES:

#### Chainsaver Rims

Power Plastic sprockets are optionally available with Chainsaver Hubs. The Chainsaver Hub is located in a position that provides for even load distribution along the sidebars of the chain.

#### Special Hubs

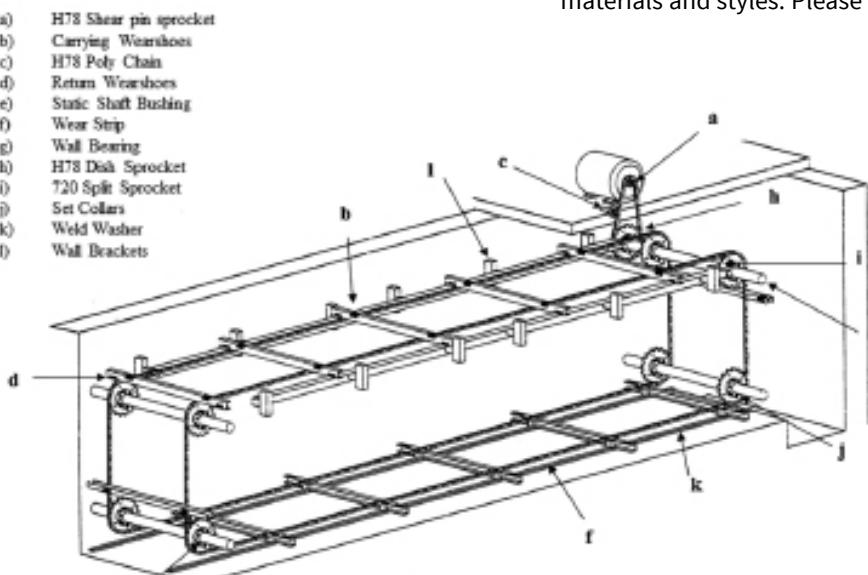

Power Plastic drive sprockets can be supplied with an integral shear pin hub in "A" plate style for attachment to a separate overload protection device, such as a ball-detent torque limiter.

Shear pin hub sprockets are the simplest and most cost efficient of the overload protection devices, and are available in a variety of designs and materials to fit your needs. Hubs are available in UHMW-PE as well as Nylon 6, for extremely corrosive environments.

#### Segmental Rim Sprockets

Power Plastic sprockets are optionally available in segmental rim design. These sprockets are constructed such that the rim section of the sprocket, consisting of several segments, can be removed and reversed or replaced without removing and replacing the sprocket hub. This can make sprocket replacement less costly.

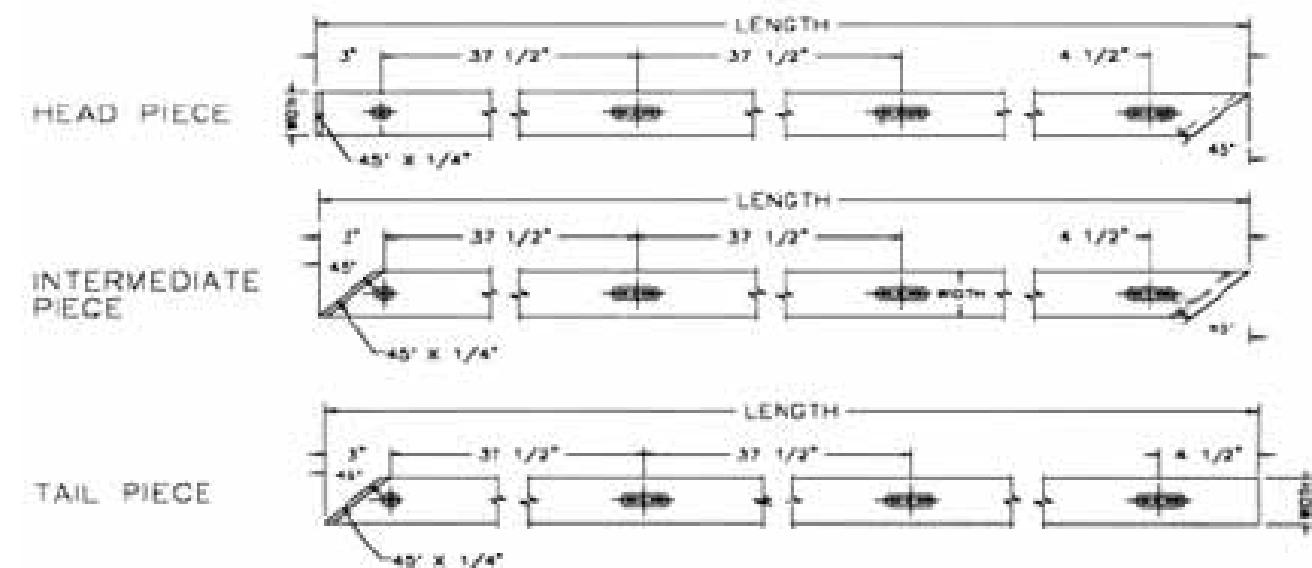

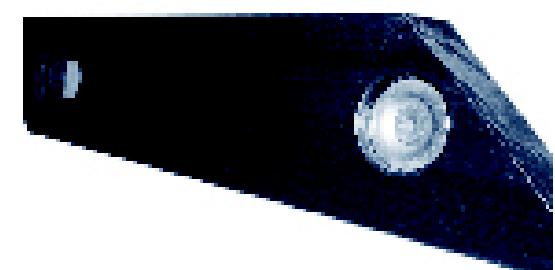

Power Plastic segmental rim sprockets are available in a variety of hub materials and styles. Please contact Power Plastic for your specific needs.

# Waste Water Treatment

## Wear Strips

Power Plastics UHMW-PE wear strips are the ideal wearing surface for non-metallic and metallic wear shoes. These corrosion resistant strips lower friction, reduce noise, and allow flight to run smoothly in a rectangular clarifier, reducing wear on flight shoes. Easy to install with weld washers for tee-rail, concrete floors, or return track, Power Plastics UHMW-PE wear strips make systems more energy efficient. These wear rails have a low coefficient of friction which enables them to not absorb water or swell, and yield longer system life. Beveled ends and slotted holes allow for thermal expansion during down time. Power Plastic wear strips are available in a variety of widths and thicknesses, in virgin grade and reprocessed UHMW-PE. See wear strip assembly sheets for mounting options.

## Carry and Return Wear Shoes

Power Plastic reversible flight wear shoes are manufactured from UHMW-PE for low coefficient of friction, superior corrosion resistance and high abrasion resistance. Unlike heavy metal shoes, Power Plastic wearing shoes greatly reduce friction when run on UHMW-PE wear strips, allowing chain and flight systems to run more smoothly. Power Plastic wear shoes also last longer than Polyurethane and Nylon wear shoes since they do not absorb water and are more corrosive resistant.

## Flight Filler Blocks 720 Chain

Power Plastic filler blocks for 720 chain attachments and flights are precision molded from tough, wear resistant polypropylene to ensure proper alignment between the flight and attachment link. 720 Filler blocks come in two sizes, FB-6 and FB-8 for corresponding nominal flight depths. Polyurethane filler block FBH78-4 and FBH78-6 are also available for H78 F2 attachment paddles, and will run on 6" or 4" flights. Filler blocks act as spacers between the flight and the F22 attachment link, providing rigidity and negative buoyancy. Filler block holes are ASTM standard spacing, and holes are sized to accommodate 3/8" flight hardware.

FBH78-6

FBH78-4

# Waste Water Treatment

## Static Shaft Sleeve Bushings

Perfect for retrofits where existing shafting is worn and rusted, Power Plastics static shaft sleeve bushings reduce costs and installation time in rectangular clarifiers. As an alternative to a dynamic system where sprockets run directly on turning idler shafts, this system allows idler sprockets to rotate freely on PPC static shaft bushings, while existing shafts can be immobilized and reused. (On new installations, the static system does not require bearings for the idler axles, and only fixed steel shaft supports are needed). Static bushings are secured to the shafts with setscrews or clamps as the sprockets rotate on the sleeve's smooth outer surface between integral set collars. Made from corrosion resistant, self-lubricating Nylon, Power Plastics split static shaft sleeves are easy to assemble, eliminating the need for shaft and bearing replacement. Static shaft sleeve bushings are also available in UHMW-PE material.

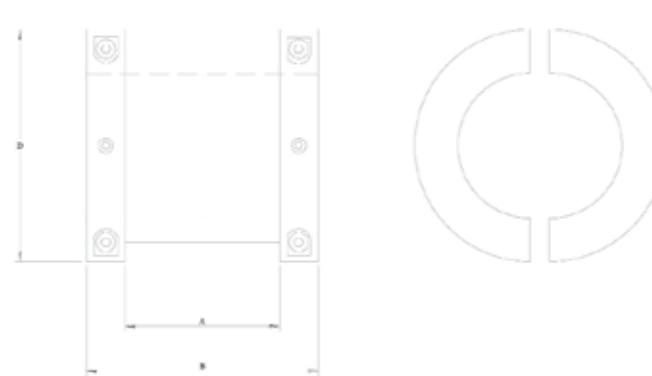

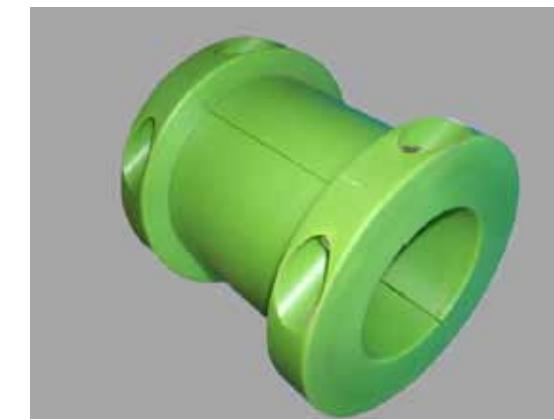

P/N	Required Sprocket: Bore	Maximum Size Shaft	A*	B*	D*
NSB375	3-3/4" idler	2-15/16"	4"	6"	4-1/2"
NSB500	5" idler	4"	4"	6"	6"
NSB525	5-1/4" idler	4-1/2"	4"	6"	6-1/4"
NSB600	6" idler	5-1/4"	4"	6"	7"

### Static Sleeve Features

Eliminates the need for wall bearings or sprocket collars  
Allow the reuse of old shafts that have poor finishes  
Integral set collars prevent lateral movement of the gear for self-alignment gear.

## Non-metallic H78 Sprockets

Power Plastic corrosion resistant Non-Metallic H78 series sprockets are split as standard for ease of installation and removal. While typically used for drive and driven sprockets, in smaller tanks H78 series gears are ideal collector sprockets when used with H78 chain and attachments. Available solid or in c-hub, b-hub or a-plate configurations, H78 sprockets come in a wide range of tooth sizes (see below). Power Plastics H78 sprockets are offered in UHMW-PE or Nylon 6 materials, with 304 or 316 ss hardware. UHMW-PE segmental sprocket teeth mounted on cast iron bodies or all cast iron sprockets are also available.

## Non-metallic 720 Collector Sprockets

Power Plastic corrosion resistant Non-Metallic 720 series sprockets are split for ease of installation and removal. If wear becomes a problem on one side of the teeth, these lightweight sprockets can be simply reversed for twice the longevity. Standard PPC 720 sprockets incorporate the Hunting Tooth (HT) design featuring an odd number of teeth and  $\frac{1}{2}$  the chain pitch that also doubles sprocket life. Power Plastic 720 sprockets are offered in UHMW-PE or Nylon 6 materials, with optional chainsaver hubs, static shaft bushings, and 316 ss hardware. UHMW-PE segmental sprocket teeth are also available.

## Non-metallic drive sprocket | Shear pin

Power Plastic non-metallic H78 shear pin sprockets do not rust or seize like metallic drive sprockets are prone to do. Lightweight and easy to assemble, these drive sprockets have a strong lubricated green nylon shear pin hub and replaceable UHMW-PE or Nylon 6 bolt-on sprocket teeth. Steel shear pins can be provided and sized for torque requirements. To be used in conjunction with PPC NMH78 drive chain and driven sprockets, Power Plastics H78 drive sprockets prevent damage to the collector chain and flights during overload conditions. Also available in trip cam design, jaw clutch design, and cast iron construction options. Contact Power Plastics for more information.

UHMW-PE Pressure Sensitive Tape are supplied in 50 or 100 ft. lengths. They are self-adhesive making installation easy and efficient. UHMW-PE is very abrasion resistant, even greater than polished stainless steel. This high abrasion resistance makes for an excellent wear surface with very low coefficient of friction.

Pressure sensitive tape are for applications where mechanically fastening is not practical or for less labor intensive installations.

### Applications include:

- Chute Liners
- Chain Guides
- Wear Plates
- Hopper Liners
- Door Guides
- Scraper Blades
- Noise Reduction
- Gaskets and Washers

# Conveyor Track

## Introduction

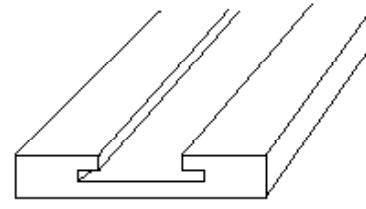

### Power Plastics Engineered Components

**Power Plastics Conveyor Track™** is designed for side flexing flat-top conveyor chains and is offered in tab, bevel and combination designs. Each design is available in straight and corner designs. Straight designs come in 10' lengths while corner designs are available in standard radii dimensions. with or without extensions. The extension on the corner designs provide smoother transitions.

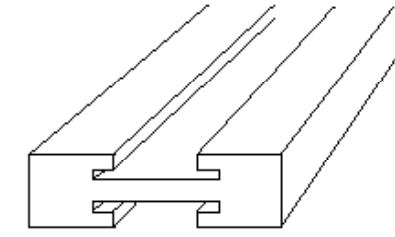

Standard Conveyor Track™ is machined from TIVAR® 1000 (UHMW-PE). Conveyor Track™ is also available for special applications that require nonstandard dimensions and/or materials including TIVAR® Ceram P®, Tivar Oil Filled and TIVAR® AntiStatic. Special materials must be specified when ordering.

## UHMW/PE C-Profiles

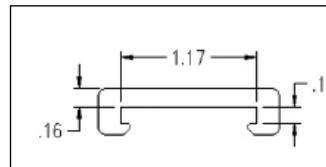

- Low friction, wear resistant, non-marring protective cover
- Reduce noise
- Ultra smooth surface finish—no Ram lines
- Can be used with Aluminum extrusions on page 40
- Impervious to moisture
- Custom colors and sizes available

Standard UHMW/PE wear strips/C shapes are white and come in 10' and 20' lengths.

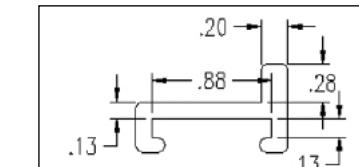

Easily available with Anti-Static, Lubricated, and Anti-Microbial additives

### NOTE

UHMW-PE

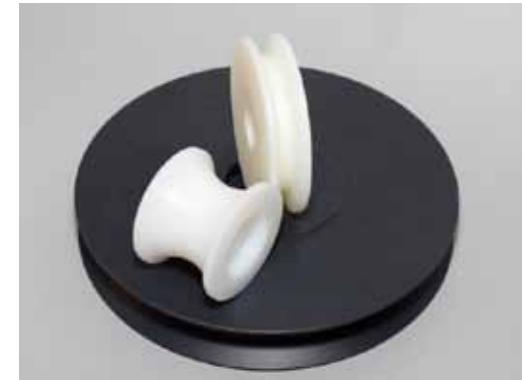

Power Plastics also manufactures pulleys in either B or C hubs. Just specify the hub type when ordering. The most common material used for pulleys is UHMW-PE Nat. but Power Plastics also manufactures pulleys from nylon and acetal.

Polymer spur gears can outlast steel gears in many industrial applications and lubrication is not required. They also run well with steel gear sets and can protect from sudden mechanical failure by acting as a sacrifice gear.

The most common type of material is Nylon, but **Power Plastics** can manufacture gears in any material. They are also not limited to the specifications shown in the chart.

Polymer spur gears can outlast steel gears in many industrial applications and lubrication is not required. They also run well with steel gear sets and can protect from sudden mechanical failure by acting as a sacrifice gear.

The most common type of material is Nylon, but Power Plastics can manufacture gears in any material. They are also not limited to the specifications shown in the chart.

### NOTE

UHMW-PE Nat.

## Rollend Bearing Adapters

P/N	Item	Description	Material	Dimensions
REB1007	Hex Adapter	7/16" hex assy.	Nylon	5/8" dia. x 5/16", 1/16" flange
REB1411	Hex Adapter	11/16" hex assy.	Nylon	7/8" dia. x 1-13/16", 3/32" flange
REB0824	Conveyor or Roll Pin	use w/ blind bore	Stainless Steel	1/2" dia. x 1-1/2"
REB0812	Flange Roll Pin	use w/ blind bore	Stainless Steel	1/2" dia. x 3/4" from flange

Solid UHMW-PE mounted bearings offer a low cost solution to caustic environments that would normally attack their steel counter parts.

UHMW-PE does not corrode or contaminate environments and they do not need to be lubricated.

### NOTE

Material: UHMW-PE Nat.

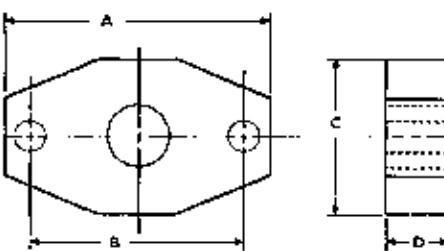

# Solid Bearings

## 2-Bolt Bearings

P/N	Nom. Bore	A	B	C	D	Max. Speed	Max. load (lbs.)
